

## **ebXML Quality Review Group**

### *Summary of Review of*

# **ebXML Registry Information Model**

*Version: (0.55) Release Date: 19<sup>th</sup> Jan 2001*

Report prepared: 24<sup>th</sup> January 2001

Reviewers: Tim McGrath, Nagwa Abdelghfour, Joe Baran, Bob Glushko, Murray Maloney, Jon Bosak

The Quality Review team have completed their review of the Registry Information Model Specification v0.55 as submitted by the Registry and Repository team on Jan 19<sup>th</sup> 2001.

We believe the Registry and Repository team have addressed the “content issues” identified in the review of the Registry Information Model Specification v0.52 on January 6<sup>th</sup>.

**Therefore, we recommend that this document be released for public review.**

In addition, our review has identified some items that should be included in any editing following the public review period.

#### Items to be addressed during Public Review

Line 35. Please remove Joseph Baran from the list of participants, as he is a member of the Quality Review Team.

Lines 161-166. The description of interfaces for some objects needs to better explain the role of these interfaces (i.e. that they internal to the Information Model), rather than what they are NOT.

Lines 185-186. The audience should include the builders of ebXML Registries

Lines 295-298. The definition of a “package” should clarify what the “logical” relationship means. Is this a hierarchical relationship or not?

Lines 270-273. The term 'association' is overloaded in that it is used as an interface and to describe the relationship between objects.
